**Tapered Edge for improved air flow**

**TreadSafe has been designed and tested to allow optimum airflow.**

By engineering a tapered profile, it is possible to decrease the amount of aerodynamic drag along the side of the vehicle.

**Safety Warnings pre-applied**

**Additional safety decals are applied to each side of the catwalk.**

TreadSafe offers a great platform to apply safety warnings to both the end user and also other road users.

**Super safe reverse punch tread**

**TreadSafe's reverse punch creates a seriously safe, anti-slip working area.**

The punch has been engineered with the optimum top roll radius removing any sharp edges but increasing grip.

Audible Talking Turn Alarm		✓	✓
Reverse Alarm			✓
Left Turn Interface	✓	✓	✓
Side Step Radar Scan (Blind Spot)		✓	✓

All systems are installed by highly trained engineers and all equipment carries a Reg 10 ECE Type Approval. Type approved fitment can also be arranged on some vehicle makes and models, this must be completed at Kuda UK, Ipswich if required.

March 2021 2024

From March 2021, the minimum DVS rating will be one star to enter or operate in Greater London and this will then increase to a minimum of three stars in 2024.

If your vehicle does not meet the DVS star rating or is not rated, you will need to meet the 'Safe System' requirements to be granted a permit.

# Direct Vision Standard

Here at Kuda we offer a fully compliant and type approved safe system, fitted and supported nationwide One Package which guarantees compliance with the Direct Vision Standard

**If your vehicle is not rated (zero star), you will need to fit additional safety equipment – a 'Safe System'**

Source: HGV Safety Permit Guidance

## Safe System Required Equipment

1. Class V mirror shall be fitted to the nearside of the vehicle.
2. Class VI mirror shall be fitted to the front of the vehicle.
3. Side under-run protection shall be fitted to both sides of the vehicle (except where this is impractical or proves to be impossible).
4. External pictorial stickers and markings shall be displayed on vehicles to warn vulnerable road users of the hazards around the vehicle.
5. A sensor system that alerts the driver to the presence of a vulnerable road user shall be fitted to the nearside of the vehicle.
6. Audible vehicle manoeuvring warning shall be fitted to warn vulnerable road users when a vehicle is turning left.
7. A fully operational camera monitoring system shall be fitted to the nearside of the vehicle

## Lower Level Windows Type Approved Fitment

Along with camera and sensor requirements we are also able to offer lower level passenger door windows, fitted and fully type approved.

Our windows do not stop the passenger window from opening and are fully approved by Mercedes-Benz

7" High Def Dash Monitor	✓

Prominent Pictorial Safety Signs	Usually Factory Installed
Audible Talking Turn Alarm	✓
Left Turn Interface	✓
Side Step Radar Scan (Blind Spot)	✓
Rear HD Night Vision Camera	Not req, optional

# Type Approval

Speak to our experts, we have you covered

Here at Kuda UK LTD we are proud that we have been Audited and Approved by the VCA for CoP (Conformity of Production) Clearance. This Clearance enables us to offer fully Type approved products and fitting services across a wide range of vehicles.

## Approval held for up to 4.6m

Our type approval scope covers the fitment of a full air management kit to a height of 4.6m. Perfect for High Volume trailers.

## Fitting on-site at Kuda UK, Ipswich

We are also able to work closely with dealers holding ISO, CoP or similar clearance to achieve a "satellite" fitting site partnership, enabling approved fitting at the dealers own premises.

## Approval for a wide range of trucks

Speak to one of our experts to find out which chassis we hold type approvals on and how we can help you meet the requirements.

The CoP Clearance just further reinforces the quality of our products and services, when you purchase from Kuda UK you can rest assured that product you receive has been manufactured under the highest standards and followed our strict Quality Control processes.

Our in house Type Approval experts are able to advise on any questions you may have regarding the fitment of any of our products prior to registration and how this may effect a vehicles base approval.

We are able to issue Stage 2 Certificates of Conformity for work carried out at our assembly plant here at Kuda for a wide range of vehicles and products.

## EMC REG 10 Approvals

- ✓ Microwaves
- ✓ Fridges
- ✓ Cameras
- ✓ Handbrake Alarms
- ✓ Inverters

We are able to fit a huge range of electronic equipment covered under EMC Reg 10 as part of our NSSTA and Whole Vehicle Type approval clearances.

So if you need a microwave, fridge, dash cam, reversing alarm or anything like it fitting to a vehicle prior to registration we are likely to have you covered.

## The Kuda Fleet Division Difference

Every commercial fleet in the UK is driven by its own values on safety, reliability, punctuality, value and driver retention. In some ways this makes every fleet the same, but mostly each fleet and its management are entirely different. From the traffic office to the workshops, from tracking systems to vehicle makes and models, we understand that not every company has the same requirements. Whilst we can't help run your day to day operations we can ensure the specification of your new vehicles in one which will suit your operational requirements, budget and most importantly, ensure the drivers, which are the staple of your operation are able to do their work in the most comfortable, efficient and safer manner as possible.

## From Tender to Delivery

1

### Initial Specification

Our team will take the time to work through your existing tender specification with your chosen dealer and ensure that all of your requirements are met. We can also meet with you to discuss any new technologies or items which could aid in improving your operation or saving money on your existing specification.

2

### Factory Delivery Direct to Kuda

Working closely with your dealer we will organise for your new vehicles to be delivered from the factory directly to our facility. The vehicles will be carefully checked by our experienced engineers to ensure your specified equipment can be mounted and the vehicles are the correct Type and Variant expected.

3

### Additional Items Expertly Installed

Once your vehicles have been checked in and the specification agreed, our in-house team of engineers will proceed with the install of your additional equipment. Ensuring the positioning and operational functionality are to your exact requirements.

4

### Vehicle Checked and Approved

Following the install of your equipment our internal Quality Control process will ensure each component is checked and signed off. The vehicles are then passed for Type Approval and a Stage 2 Certificate of Conformity issued for each one by our in-house Type Approval team.

## Install Pre-Registration - Bill with the vehicle

Vehicle  
Certification  
Agency

All of our fitments are of course covered under Stage 2 Type Approval, meaning you can rest assured whatever you specify has been fitted not only to the vehicle manufacturers guidelines, but also fully compliant with all European and Domestic Type Approval legislation and regulations. This clearance from the VCA enables us to issue certificates of Conformity and modify your vehicles prior to registration. The main benefit of this for fleets (other than peace of mind) is that any additional equipment and fitments are able to be billed with the total cost of the vehicle from the dealer prior to the truck being registered and PDI'd.

## Kuda Fitting Service

Our team of trained, mobile engineers are available across the UK to install over 90% of the products we offer, on-site, at your premises.

They are fully equipped in a modern fleet of vans, with the full compliance training and insurance. Our engineers can travel almost anywhere in the country (pre-booking required), either bringing the products to be fitted with them, or meeting products previously delivered by our carriers.

Currently we only offer our mobile fitment service for products supplied by us here at Kuda.

## How much does it cost?

Well, it's a very simple calculation, in addition to the labour costs of the product fitment (please call us for a fitment quotation) we charge a simple £1.00 (Exc. VAT) per mile travelled to and from the job. Below is a map containing examples of travel rates to some central locations.

## Mileage Calculation Examples

Fitting mileage is calculated using Google Maps. Start point is at IP7 7HA (Kuda UK), end point is the fitting location post code.
